# G-Series

## 3a. GS6 Unisex Jacket

A new soft shell unisex jacket, evolved from our extremely successful G6 gilet. Made from a breathable soft shell fabric, it can be worn under waterproof outer garments or as a light outer garment. Mesh lined interior for breathability and great heat transfer. Uses our brilliant EXR-10 heat system to heat the back and each side of the chest for a feeling of total warmth to the upper body. Includes 3 level lithium battery and charger.

## 3b. G6 Unisex Gilet

The G6 is our latest design sports gilet created to be even lighter and thinner for the active sports person. Breathable fabric ideally suited to be worn under ski jackets, riding jackets, motorcycle outer clothing and diving dry suits etc. An all round brilliant performing garment featuring our EXR-10 heating system providing heat to the back and to each side of the chest for a feeling of total warmth to the upper body. Gilet is supplied with a 2200mAh 3 heat setting Lithium Polymer battery with mains charger as standard.

## 6a. X1 Glove Liners

Following on from our first generation heated glove liners the X1 are made from a lightweight tough stretch fabric and use the latest composite fibre heating wire which now gives an extra 5C of heating temperature. The real benefit of this type of fibre over traditional elements is that the fibre is within the glove materials so that it moves and stretches with the glove and heats all around the fingers to avoid the cold spots found in the finger tips of some heated gloves. X1 - Liners will heat to a max temperature of 49 - 50C worn next to the skin. When worn with a quality pair of outer gloves providing insulation the temperature within the fingers of the glove will be increased by around 10C.

## 6b. X5 Wireless Insoles

The X5 wireless heated insoles have been developed as part of the Blazewear X-Range, designed for the active person to prevent coldness to feet and toes. Remote control function for ease of operation and no external batteries or wires make our insoles a really practical solution. Uses the very latest in carbon based heating technology with cyclical heating function to extend battery life.

- Remote control with integrated lithium-polymer cells with high thermal efficiency.
- Supplied in 4 sizes and can be trimmed to fit different foot shapes and sizes.
- Battery integrated within the sole so no external batteries or wires.
- Heating time up to 6 hours with 3 heat settings selected via remote fob.
- Heating part of the insole has even temperature across the surface.
- Location of the heating element is in the front part of the foot and toes .

# I nostri prodotti più avanzati di nuova concezione

## 7a. Heated Back Support

Our superb heated support belt for back pain is the first of its kind available on the market. The twin heating elements, located on either side of the lower back, can be heated separately and at different temperatures for those who suffer more on one side than the other. It's very light so can be worn under your clothes all day. It has an adjustable velcro connection and provides soothing support. Available with either 2 battery boxes for your own AA batteries or 2 of our advanced lithium polymer batteries with 2 levels of heat and their own charger, that are placed in two special pockets, one on each side, which do not restrict your movement. The carbon elements emit long infrared radiation that penetrates deep into the muscle of the lower back.

## 7b. X7 Heated Shorts - Available Soon!

Heated shorts, for men and women, which provide heat to the lower back area and the front of the thighs. These products will be available soon. Please contact us for more details.

All our heated gloves are available with battery boxes to use your own standard or rechargeable AA batteries, or rechargeable lithium batteries supplied with their own charger.

# Socks and Insoles

## 9a. Heated Socks

If you go outside in winter you need these! These socks are totally modular therefore, unlike others where the element is contained within the fabric, the paper thin flexible heating element which is contained in a special pocket on the underside of the sock, is totally removable which means that these socks can be put in a hot wash. The socks are one size and you can acquire spare pairs of socks (without elements) which means you will always have a fresh pair available whilst the others are in the wash. The elements are heated either by battery boxes with on/off switch which use 3 AA standard or rechargeable batteries (Batteries not supplied), or a pair of slimline lightweight 3.7V Li-Po rechargeable batteries which are positioned, where you require, on the leg in elasticated pockets on fully adjustable leg straps. A battery charger is also supplied when you select the premium option of Li-Po batteries.

## 9b. Heated Insoles

This advanced model has elements inserted into the insole like a "sandwich". The insoles have a total thickness of about 4.5 mm. This allows maximum protection for the elements and prevents the cable being accidentally "ripped". The bands to support the batteries or the battery holder (depending on model chosen) are elastic and with Velcro closures thus offering maximum comfort and individual tightness. The cable is 45 cm long, and an additional extension of 25 cm allows the bands to place the battery or batteries in the most comfortable position for you.

oppure: 333 87 57 979

# Scarf

## 10. Heated Scarf

This new model of scarf is comfortable, warm and elegant. Heat is generated by a large soft, flexible heating element of 15 x 7 cm, stitched between two layers of luxurious fleece and placed on the back of the neck. The scarf is cleverly modelled along the top and bottom to ensure that you are well covered, even at the back of the neck so you can arrange it comfortably on your neck and curve it in front of the neck and place inside your jacket or coat to protect from the air. Supplied with either a battery box with on/off switch to use AA standard or rechargeable batteries (batteries not supplied), or a slimline lightweight 3.7V Li-Po rechargeable battery with its own charger for greater heat and longer use.

## Batteries and Accessories

All garments are supplied as standard with a rechargeable Lithium-Polymer 2200mAh battery with mains charger and a hand held controller which sits in a dedicated pocket inside the garment or can be placed in an outer jacket or trouser pocket. The controller has 3 heat settings to allow the adjustment of temperature. Battery will heat garment for 1.75 - 4.5 hours depending on the heat setting chosen.

### Available batteries and accessories:

Standard spare battery  
Double capacity battery  
Remote control battery

Spare mains chargers  
Car chargers  
Extension cables

### Batteries and Accessories for Gloves | Insoles | Back support | Socks | Scarf

Standard alkaline batteries can be used such as Duracell's but as these are 'one use only' this is an expensive route. Alkaline batteries do not deliver a constant current and so we do not recommend their use. It is much better to buy NIMH (nickel metal hydride) rechargeable batteries such as those used in digital cameras. We recommend the highest capacity available such as 2900mAh as this means that they will last longer. These batteries can also be recharged up to a 1000 times and so are a much more viable

option in terms of cost. We strongly recommend upgrading to our Lithium Polymer batteries as these are supplied with a mains charger. These batteries are smaller lighter and last longer and have two heat settings to allow the temperature to be controlled. There is obviously the additional cost involved, but we feel that the benefits gained are really worth the investment and can add up to 2.5 more hours of heating time than conventional AA batteries. Battery capacity is 3300mAh operating at 3.7V.

# The 'Blaze' Rug

## 11. The 'Blaze' Rug

### Benefits of the Rug:

- Quick and easy to warm large muscle areas prior to exercise to enhance performance and reduce injury risk
- Increases blood circulation and prevents excessive cool down after endurance riding
- A brilliant aid for relief of stiffness and as a treatment for injuries
- Warms horses when damp and shivering after being outside in winter
- Gentle warmth for long periods underneath night rugs
- Less bulk for the horse than from heavier, thicker rugs

### Features of the Rug:

- Controllable heat from a small lightweight battery to warm the main muscle areas of the horse before exercise
- Far-infrared function to aid blood circulation and get the horse ready for action
- Five heat setting control allows adjustment of temperature
- Waterproof and breathable exterior, designed to be used as an outer or inner stable rug

The Blaze Rug uses the latest in polyester based heating technology using a total of 12 heating strips which emit far-infrared radiation, giving proven benefits in aiding blood circulation. Rug interior is 100% polyester ensuring maximum heat transfer to the horse's body. For ease of use, the rug is fitted with a small external pocket at the shoulder to hold the combined battery and controller.
